

What Did China's Zero-Covid Policy Do?

By: Abby Janssen

For nearly three years, China has been locked down and isolated from the rest of the world. While the rest of the world struggled through COVID-19, China's President, Xi Jinping, used his power to lock down the country under the "zero-COVID" policy. However, how much did the zero-COVID policy actually benefit China's struggle with COVID-19, and how did people react to it?

The zero-COVID policy was due to their zero-tolerance policy on COVID cases. As the rest of the world was getting vaccinated and slowly returning to normal, China remained in strict lockdown. While this strategy was quite successful during the beginning of the COVID pandemic, it couldn't keep COVID away in the long run (Forbes).

During the strict lockdown, many people lacked necessities such as medical care and food supplies. People started to become frustrated

over the government's overly cautious and harsh measures. In November 2022, protests began to break out in parts of China after ten people died in an apartment fire (The Guardian). Although the local government claims the COVID pandemic had no connection to the delayed medical services, many people blamed the strict COVID rules. More and more people started protesting for their freedoms and basic human rights (TIME).

As China makes a dramatic switch from severe lockdowns to opening up the country again, the final outcome seems uncertain (The New York Times). While China's zero-COVID policy protected China from a large amount of COVID cases during the worst part of the pandemic, it led to the rise of anger from people who believed their freedoms and rights were taken away during the lockdown. As of this Lunar New Year, cities such as

Wuhan and Shanghai are entirely different from how they were only a few months prior. People were seen out and about in crowded areas and with family during the holiday. While people got to enjoy the Lunar New Year with their families, it is reported that eighty percent of China's population has caught COVID-19 since the end of the lockdown the previous month (Taipei Times).

While COVID cases skyrocketed, hospitals in China have started to overflow, but vaccination rates, especially for the elderly, are low compared to other nearby countries such as Japan. While China faces threats from COVID after opening up the country after years of lockdown, many people are excited to be free from quarantine and as Wan, a Shanghai college administrator, states, "redeem the loss of the past three years" (Nikkei Asia).

2022: The Most Expensive World Cup Ever

By: Jasper Lai

Whether you are a die-hard soccer fan or have never heard of Lionel Messi and Cristiano Ronaldo, you probably know a big soccer tournament happened at the end of last year. The 2022 FIFA World Cup kicked off on November 18th in Qatar, with the hosting country losing to Ecuador, the first time a hosting country lost in the opening match. In case you don't know what a World Cup is (as you'll learn), it's the most prestigious and popular soccer tournament consisting of 32 national teams held every four years. According to FIFA, the soccer governing body of the world, more than 3.5 billion people tuned in to the 2018 World Cup held in Russia.

To every professional soccer player, winning the World Cup for their country is their biggest dream. To many of the fans, this would be the last time they'll see their idols competing for their countries; superstars like Messi (Argentina), Ronaldo (Portugal), Neymar (Brazil), and Modric (Croatia) played their probable last World Cup of their career due to how old they'll be by the time of the 2026 World Cup.

Put aside all the controversies surrounding this year's tournament for a moment; let us review the World Cup structure before getting into the magical moments of World Cup 2022. All 32 teams get divided into 8 groups of 4 teams each. Then the top 2 teams in each group proceed into the knockout

stage. Japan was placed in the toughest group in the tournament, with former world champions Germany and Spain, as well as Costa Rica in the same group. Despite all odds, Japan secured a 2-1 comeback win in their first match against Germany. The second game did not go well for the Japanese, losing to Costa Rica by 0-1. However, Japan once again shocked the world in their final group stage game against Spain, defeating the much stronger side by another 2-1 comeback win. Their victories over Germany and Spain helped Japan to finish first in the toughest group in the tournament. Japan was eliminated in their next game after losing to Croatia on penalties.

South Korea, led by their captain Son-Heung Ming, also had a memorable group stage. Despite failing to win their first two games against Uruguay (0-0) and Ghana (2-3), they defeated Portugal in the crucial last game of the group stage. The last-minute goal by Korea secured them a spot in the round of 16. Unfortunately, just like Japan, they were eliminated in the round of 16 by Brazil. Portugal and Brazil became favorites to lift the World Cup after a strong start in the group stage.

However, both teams were defeated by Morocco and Croatia, respectively, in the quarter-finals. It was heartbreaking for Portuguese and Brazilian fans, as their superstars Ronaldo and Neymar failed to win a world cup in their careers. Most of

the games ended in a close score, and many had to be decided by penalties to break the tie. A penalty shootout can be exciting if you are a neutral fan and nerve-wracking if your favorite team is on the field. After all, there can only be one winner.

After 63 intense and stunning games, it all came down to the finals - defending champion team France took on Argentina, led by Messi, arguably the best soccer player ever. He had won nearly every trophy except for a World Cup trophy. Many fans wanted him to win one in 2022 to mark a perfect ending to his career. With the entire stadium filled with all Argentina fans, Messi and his teammates did not disappoint the crowd, leading France by 2-0 at 36 minutes.

Just as everyone expected Argentina to win it easily, Kylian Mbappe, France's rising star, scored two goals in the 80th and 81st minute to equalize the game, forcing the game to go into a 30-minute overtime. Messi scored again in the 108th minute, but Mbappe scored another crucial penalty to force the game into penalty shootouts. Finally, after four rounds of penalty, Argentina won the 2022 World Cup by 4-2. It was not an easy journey for Argentina. They lost to underdogs Saudi Arabia in the first game and almost got eliminated by the Netherlands in the quarter-finals. Lionel Messi stepped up in crucial moments which boosted team morale, proving that he deserves to

be called the best player in the world.

The 2022 World Cup ended in a fantasy, but this could also be the most controversial World Cup in history. For the first time, the tournament took place in winter instead of summer because the summer weather condition in the Middle East is unbearable. Qatar did not have the conditions to host a massive sporting event like the World Cup as the country is sparsely populated amongst desert lands. However, thanks to their possession of oil and natural gas, they became one of the richest countries in the world. They used that wealth to bribe top FIFA officials to host the world cup, even though they did not fulfill the basic conditions. They spent more than \$200 billion - the most in any World Cup - to build seven huge stadiums and a new city to host the tournament.

All of this was made possible by migrant workers from places like Pakistan and Bangladesh hired by the Qatari government. Working conditions for those migrant workers were horrible, and many of their human rights were abused. Despite numerous NGOs calling for the boycott of the World Cup, no one really responded. Qatar made an enormous bet that all the great moments of the World Cup would eventually cover up all the ugly controversies; now, months later, it seems to have paid off.

Gruesome Stabbings in Idaho

By: Audrey Chih-Yu Wang

Images of the victims from Fox News via Instagram (@xanakernodle / @maddiemogen / @kayleegoncalves).

On November 13th of 2022, four University of Idaho students were found dead off-campus in Moscow, a city in Idaho. The four students, identified as Madison Mogen (21), Kaylee Goncalves (21), Ethan Chapin (20), and Xana Kernodle (20), were found on the second and third floors of an off-campus house. Autopsy reports of the students show that some of the victims attempted to resist their attacker, but they received multiple stabbings despite their efforts (Washington Post). The murder weapon, described as a “large fixed-blade knife” by the police, has yet to be found (CBS News).

Police are still uncertain about the victims’ whereabouts and exact timeline prior to the murder, but believe that Madison Mogen and Kaylee Goncalves were at a downtown club, while Ethan Chapin and Xana Kernodle were at the Sigma Chi fraternity house before returning home at approximately 1:45 AM. Moscow police had deduced that the murders would have occurred sometime around 3 AM on the 13th of November.

Aside from the four victims, two other female students share the off-campus house. However, the two students were deemed innocent and believed to have been asleep during

the murders. On the morning of the attack, the two students had called some friends over, afraid that the students living with them had passed out upstairs and were unresponsive. The group of friends called 911 right around noon (NY Times). Before the police released any more details regarding the murder investigation, warnings were issued to the Idaho residents reminding them that it was in everyone’s best interests to remain low throughout the investigation.

Seven weeks after the murder, Bryan Kohberger, a 28-year-old Ph.D. student of criminology at Washington State University, was arrested by state police in Albrightsville, Pennsylvania, and charged with four counts of murder and one count of burglary (CBS News). Kohberger is currently awaiting his trial in the Monroe County Correctional Facility after being denied bail by a district judge in Pennsylvania. Kohberger’s motives for murdering the four students are still unknown, but rumors and speculation have circulated online.

Surprisingly, it took the police almost two months to find the murderer, and the investigation had even been rumored to come to a standstill after authorities failed to name a suspect. Weeks after, the police finally shared details

regarding the murder with the public.

One significant piece of evidence that led investigators to suspect Kohberger was a direct description from an eyewitness account. One of the surviving roommates described the murderer as an athletic, 5-foot-10 man dressed in black. She claimed to catch sight of Kohberger early in the morning. Moscow police also discovered a white Hyundai Elantra vehicle parked near the students’ home on the morning of November 13th.

A few days after the vehicle was found, Washington State University officers determined that the car was linked with Kohberger. Other records of phone tracing show that Kohberger had previously visited the house more than a dozen times before finally attacking his victims. Kohberger’s DNA also matched with other genetic material the police found in the house.

Kohberger’s neighbors and close friends had described him as non-suspicious and very chatty. He was a well-known, friendly neighbor who was always eager to talk to others (Insider). His friends described Kohberger to be one interested in psychology.

The murders had undeniably shaken Moscow up as residents had not seen a murder in their region for over seven years. After this recent attack, the community started taking multiple precautions, such as walking around the town in larger groups and avoiding lingering outside after dark. Many citizens and university friends also voiced their support and justice for the victims.

Future Business Leaders of America

By: Hayden Brandt

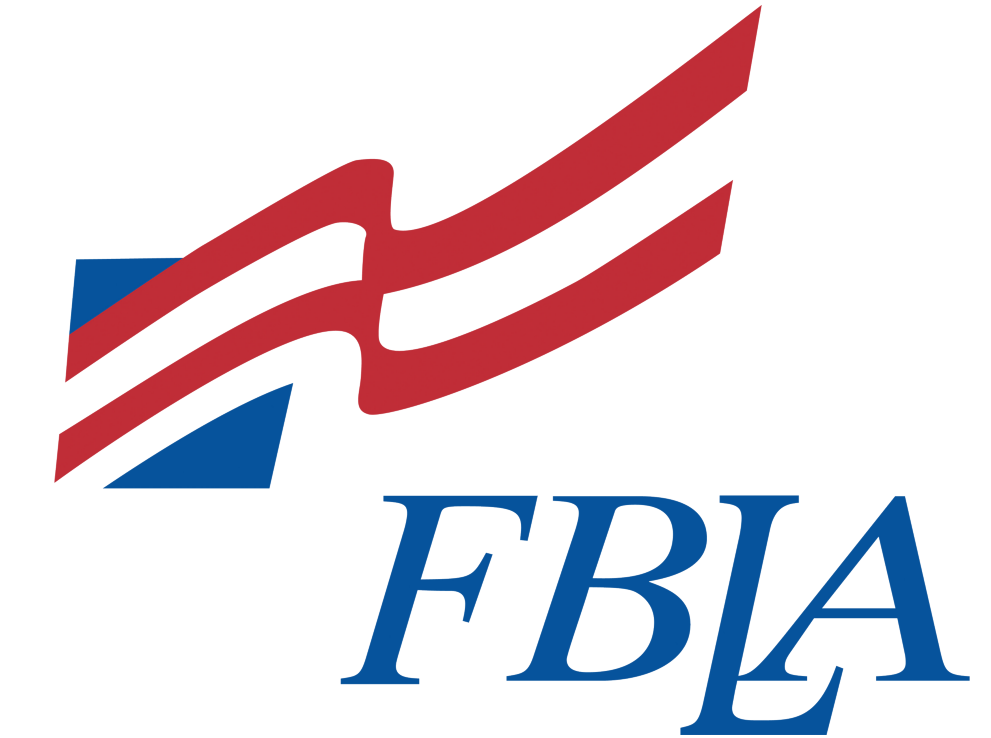

For months of the first semester, a certain club had been researched and planned out, biding its time before its arrival at MAK. The debut of a new club in the second semester is bold as the amount of clubs has increased significantly this past year. With each club asking for some of your time, searching for a good fit is more challenging than ever. FBLA, otherwise known as Future Business Leaders of America, has come to Morrison Academy Kaohsiung, with something unique to bring to the table.

Business is a subject that is incredibly important in everyone's future. The need to understand it and gain the ability to use it to your advantage is integral to achieving one form of success. Our school, however, does not have a business club for those with interest in the topic. The leaders of FBLA are here to create a space for like-minded people to discuss and learn about business. They wanted to provide the opportunity for leadership

experience and career preparation in high school. Of course, FBLA is not a random idea that popped in the mind of a student at MAK. The first FBLA group was founded in 1942.

Since then, different groups have appeared throughout high schools in all of America. In 2021, their online National Leadership Conference consisted of over 12,000 student attendees. Even notable MAK names like Mr. Newkirk and Mr. West have talked about their roots in FBLA, as they joined it back when they were in high school.

Leaders that run FBLA in America utilize many different activities and virtual experiences to support real-world business success. One such activity is the Intuit Social Innovation Challenge, where members are given a real world challenge, and are tasked to theoretically solve it, with a possible cash prize. The Stock Market Game gives members imaginary money and a virtual stock market that

spans 10 weeks in order to teach the masses how to invest, without any real money loss. This system allows for mistakes to be made first in a virtual world, and not with money that you want to hold on to. Competitions are the final challenge of FBLA. There, the participants must solve a business related problem.

Previous tasks include coming up with a presentation for executives, a social media promotion strategy, and developing a website. With a smaller scale and budget, MAK's Future Business Leaders of America aims to replicate this experience in Taiwan.

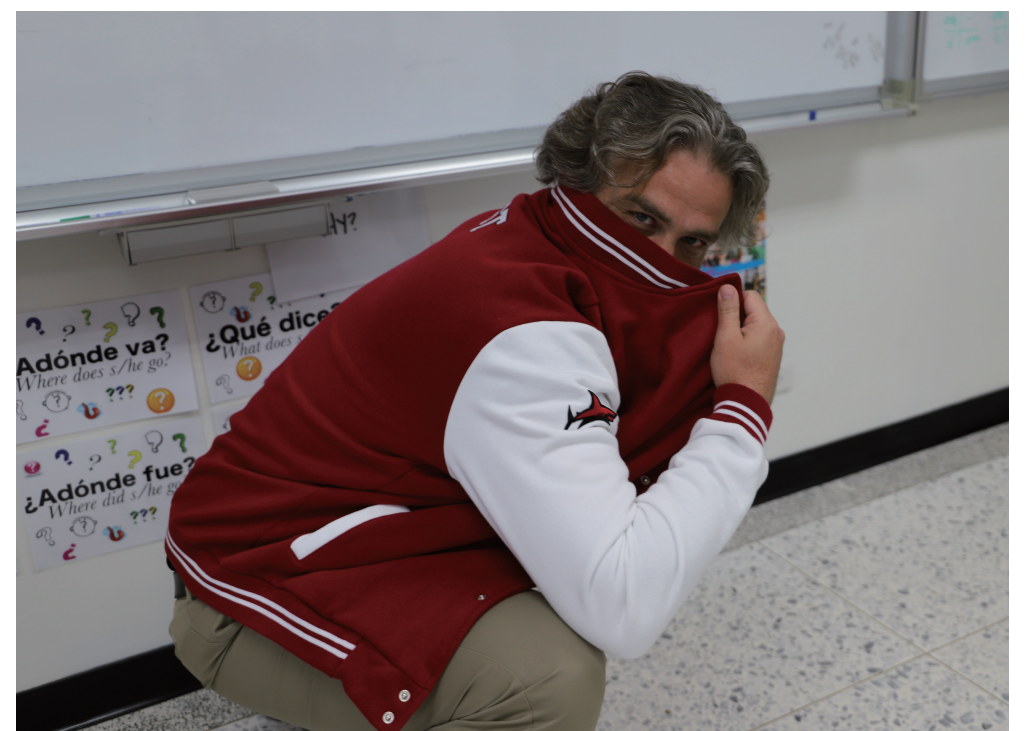

A typical meeting at FBLA will be diverse yet concise. Meeting during Thursday flex, there will be some sort of opportunity to learn and practice in the world of business. One may expect a business lesson and discussion led by Mr. Newkirk at a meeting, or perhaps an activity like the ones mentioned earlier. Another possibility would be a brainstorming session for products and how to sell them here at MAK. At the moment, FBLA's leaders are discussing their

collaboration with the Shark Shop, as well as how to go about different fundraisers.

FBLA has made its debut at Morrison Academy Kaohsiung, with the hope that it will be prolonged and expanded upon in the future years to come. The leaders have taken the blueprint that other schools with successful FBLA programs use, and will be reshaping and reforming it to be applicable and accessible to Morrison students. They have already completed a jacket order for MAK students and teachers. You might see Mr. West sporting his new red letterman jacket around the school sometime.

More information can be obtained through asking the President of the club, Celine Kung, any other senior staff, or by searching for their Instagram: @fbla.mak.

An "Out of This World" Talent Show

By: Joia Claire Tan

Morrison Academy Kaohsiung's 2023 Talent Show, "Out of This World," definitely lived up to its name. You can say that the performances were really out of this world (see what I did there?) From ballerinas galloping on stage to pink men rolling around, this year's show was the most interesting one yet. With STUCO's girly pop opening performance, we were shocked by the overall talent within the members of the HS Student Council. From MCs' (seniors Joseph Tsai and Sam Yang) hilarious jokes, we know they are more than just dancers but successful comedians.

There were a total of twenty-one acts that night, all with their very own personalities and skills. Middle schoolers Elissa (6), Madeline (6), Riley (6), and Jacob (6) performed Billie Eilish's song, *Bad Guy*, with their musical instruments. Other musical talents like pianists, Leo Chao (12) (who performed *Transcendental Études No.1 & 2*), Belinda (5) (*Schubert Impromptu D.935 No. 4*), and Gracie Wang (6) (*Beethoven Sonata Op.13 Mov.3*), shocked everyone with their fast fingers and steady rhythms.

Dancing acts were another highlight of that night. Many different types of dancing were showcased and performed. For possibly the first time ever in MAK history (definitely our only one of its kind this year), a ballet act shook the stage and the audiences watching it. Katie galloped gracefully across the stage and danced to *Sleeping Beauty*. Mikayla Tam (12)'s solo dance performance was by far shocking and impressive as she executed painful musical steps (we have to appreciate the help of her knee brace). Of course, we cannot forget Dance Club's yearly talent show performance. This year, Dance Club called themselves

"Newpinkafim" and danced to three songs: *Hype Boy* (New Jeans), *Pink Venom* (Blackpink), and *Antifragile* (Le Sserafim). Their incredible performance was like a concert in itself with its strong energy and hype music. Not only were high schoolers showing off their dance moves but elementary students, Emma and Meika, danced to a mixture of pop songs and slayed the stage as well.

Singers from all ages came to show off their steady vocal cords. Ms. Brown (staff) sang and played guitar as a fulfillment of a dare from some of her yearbook staffers. This majestic performance surprised all her students and her coworkers and many compliments were said. Other performances by students like Emily Tam (5) ("*Song for My Brother*" - *Crash Landing on You*), Shannon Lee (9) (*Jour 1*), Aurora Tien and Milani (*Speechless* from the movie *Aladdin*), and Karesse Chou (10) (Lauren Daigle's *Look Up, Child*) sang beautifully during the talent show and sent us all outer space. (See what I did there?). These singers have potential to be great stars in the future (see what I also did there?). Even Phineas, the elementary's favorite surprise guest, helped with the raffle drawing during intermission!

With a great finish, the senior class presented their last performance in a memorable way. As they danced their way through worship songs and cute kpop melodies, they rode their way along and waved their last goodbyes (rode away in a Gogoro, obviously). The talent show came to an end with the happy laughter brought from the seniors and the "Out of This World" 2-23 Talent Show came to a marvelous close.

The Covid Outbreak Will Get Worse Before It Gets Better

By: Michelle Huang

Traveling outbound for Chinese visitors has been an inconvenience since the inception of the pandemic COVID-19, but now it is simple and swift, without the requirement of weeks upon weeks of quarantine. Chinese health authorities stated that moving forward, overseas travelers will no longer be required to quarantine (Jett et. al). Soon after, the immigration authorities announced they will be resuming the issuing of visas for mainland travelers to travel overseas, starting on the 8th of January (Shen). Data from Chinese Travel platform Ctrip that searches for cross-border travel was ten times the usual amount at the night of the immigration authority's announcement. Japan, Macau, Korea, Hong Kong, and Thailand are amongst the most popular destinations.

After protests broke out in November on mainland China, the biggest show of public discontentment since President Xi took office in 2012, China has been rapidly reversing their restrictions. The sudden change on the curbs allowed the virus to spread freely across the 1.4 billion Chinese citizens (Shen). The National Health Commission announced that they would stop publishing daily Covid data. With the official statistics showing only one death in seven days, doubt arises amongst health experts and residents regarding the government's statistics. The data given is inconsistent with the experience of other countries that have opened borders (Shen).

Hospital reports suggest that there are an overwhelming number of patients, at over six times the normal amount, and the virus is also spreading rapidly to frontline medical staff, Chinese doctors told Reuters (Shen). Further contradicting the official statistics, local media reported the rising number of deaths from Covid, with Peking and Tsinghua universities posting increasing numbers of obituary notices from elderly staff (Shen). This abrupt change in restrictions in the world's second largest economy, China, concerns many worldwide. Many countries, in response to the lifting of Covid restrictions in China, began to impose restrictions on Chinese travelers (McCarthy). The US and the World Health organization commented on

the lack of transparency on China's part, which risks the emergence of a new undetected variant.

Soon after the reopening of Chinese borders, the Japanese prime minister, Fumio Kishida, said that visitors from China must conduct a covid test and test negative, as a temporary measure for this situation, and also planning to limit airlines increasing flights to China. "There are growing worries in Japan," said the prime minister. "We have decided to take a temporary special measure to respond to the situation." Lack of information and transparency from China makes it challenging to come up with plans, and there are large differences in the information given by the official government and local authorities, between the government organizations and the private organizations.

While the citizens rejoiced in the lifting of their restrictions, some citizens voiced their discontent with other countries' restrictions. South Korea requires Chinese travelers to wear yellow cards around their necks and ushered into testing by Korean soldiers. It is stated by Korea that the requirements imposed on the travelers are based entirely on science (Shen). While countries like Japan and Korea set restrictions on Chinese travelers, other countries, such as Morocco, have banned arrivals entirely (Jett et.al). In accordance with a statement released by the Swedish presidency, the European Union (EU) "strongly encouraged" its member countries to introduce a requirement for a negative Covid test for passengers traveling from China to the EU (McCarthy).

All of the countries implementing new curbs have cited a lack of statistics from China, who reported only 3 dozen Covid-related deaths in December of 2022, paradoxical to overcrowded crematoriums and funeral homes on Chinese social media. Local reports are also in opposition of the government's official reports. As of January 6, 89% of the Henan province's population of 99 million has been infected, said Henan's spokesperson (Jett et.al). Chinese authorities fully reject the allegations that they have not shared their information transparently, saying that despite their recent

surge in Covid cases, the virus is "predictable, under control", and that they have shared their statistics "in an open and transparent manner."

There has also been increasing concerns regarding China's refusal to use the mRNA-based Covid vaccines, commonly used in the West, and refusing the vaccine donations of the EU (Jiang and Xi). Vaccines of the RNA message are considered more efficient compared to the domestically produced vaccines in China. VOA news's Mandarin Service reported health experts from the Pandemic Center at Brown University's School of Public Health and the Georgetown University Institute for National and Global Health Law, who commented on the recent surge of cases in China. They pointed out that while the restrictions imposed by worldwide governments would likely be futile when it comes to the prevention of the virus, they could see the political desires to establish boundaries (Jiang and Xi).

"Given recent, significant changes in how China is conducting surveillance for COVID-19 cases, hospitalizations and deaths, it is near impossible to accurately assess the trajectory of China's outbreak. The WHO recently criticized China's efforts to redefine its COVID metrics, implying that these changes may be masking the full extent of

its outbreak," commented Jennifer Nuzzo, professor of epidemiology and director of the Pandemic Center at Brown. "China would be wise to deploy Western vaccines, especially mRNA vaccines, which are more effective than Chinese vaccines. China's refusal to do so has nothing to do with science and everything to do with politics. China simply does not want to admit that its vaccines are not as effective as in the West," said Lawrence Gostin, director of the O'Neill Institute for National and Global Health Law at Georgetown University. Gostin further pointed out that it would be "foolhardy to think that China's outbreak has reached its peak". "As we know from Covid-19, there will continue to be surges in cases, hospitalizations and deaths. Because China's population has very little natural immunity, the outbreak will get worse before it gets better."

Book Review: How to Stop Time by Matt

Haig

By: Hope Yang

Rating: 3.5/5

I'm definitely late in catching up to the Matt Haig hype, but after reading *How to Stop Time*, I think I get it. Sort of. When I first picked this novel up from the shelf, I immediately found the premise intriguing. *How to Stop Time* is about history and the passage of time and how we exist in it. The protagonist, Tom Hazard, has been alive for centuries, and the enormity of all he's been through is catching up to him. To escape this, he decides to become a normal history teacher—albeit having experienced a lot of the history he himself has taught—and even begins to fall into a romance. However, things aren't so easy when you don't age, especially when the secret society you belong to starts getting in the way. At times light and witty, insightful and melodramatic, this novel explores fear and desire and loss, ultimately telling the story of how someone can really ex-

perience life, one moment at a time.

First of all, the premise of this book within itself is amazing. Haig relates time and history and life, fear and loss and hope, tied together with both scenes out of daily life and various periods of history. The whole idea behind this novel drew me in, and the pacing really worked for me. This was definitely a page-turner that is at once entertaining and thought-provoking.

However, I think in terms of the execution of this idea, the tone and development and characters took away from the experience. Haig reflected that he really enjoyed writing *How to Stop Time*, and I can definitely see that, but oftentimes I found it too unbelievable, full of angst, or undeveloped. A lot of the writing comes off as self-indulgent, which I don't think is detrimental per se, but didn't fit with the overall story, or the expectation you (*continued on pg.7*)

(continued from page 6) get from the blurb and the cover.

For instance, a lot of Tom Hazard's past experiences were too tonally heavy or difficult to believe. He meets all these famous people, travels around the world, and broods for the majority of the novel. I buy that he's super old, but many scenes were simply hard to believe or too heavy-handed. There were also characters and ideas I wished Haig would develop more, such as the French teacher Tom falls in love with or how teaching history relates to him processing his experiences. Again, perhaps the reason I felt this way was because the blurb

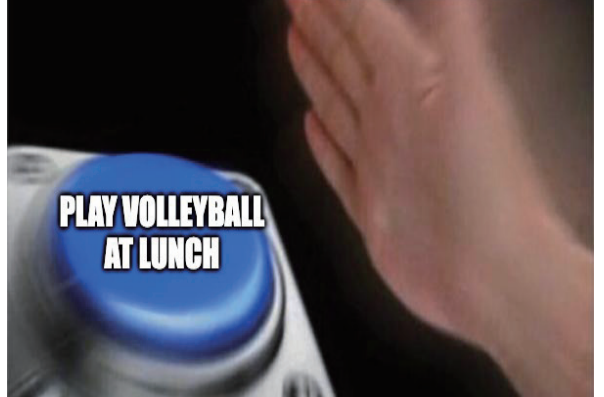

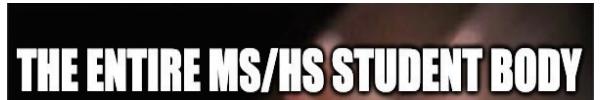

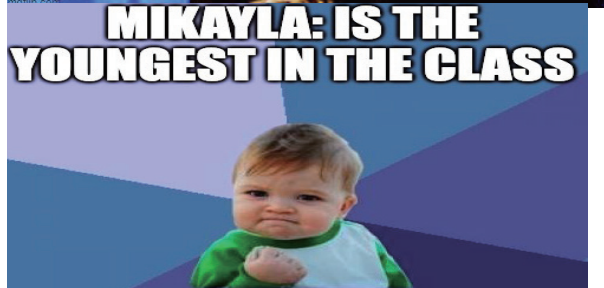

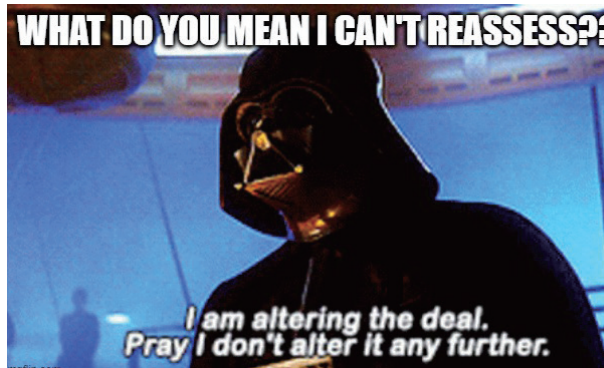

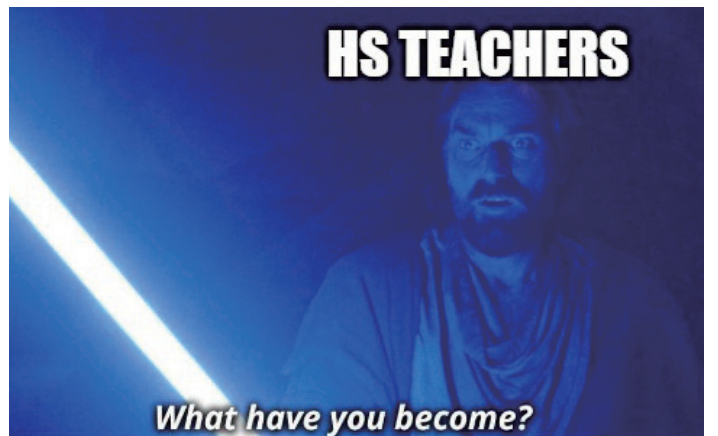

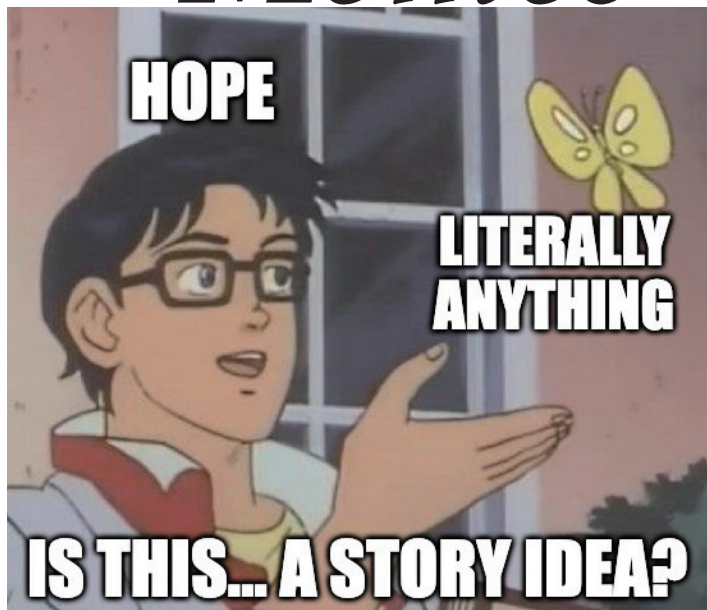

in the back of the book made it seem important, but whatever the case, I definitely wanted to see more development. On the topic of development, Tom's relationships also fell flat for me as a reader. There's a lot of love at first sight, longlasting mushiness, manipulation, and such that Haig doesn't offer an explanation for but sort of expects the readers to accept. I think, again, that I was expecting a more serious or realistic book and was taken aback by the drama, which I wouldn't have minded as much otherwise.

That said, I enjoyed a lot of the stylistic choices that the book made, such as the perspective. It's second

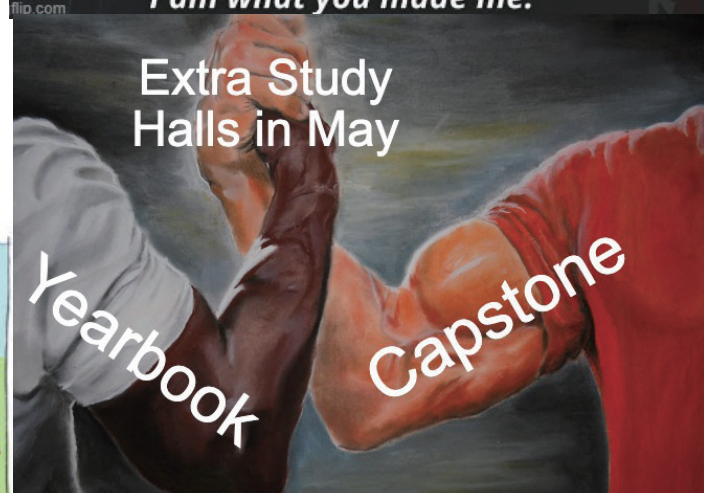

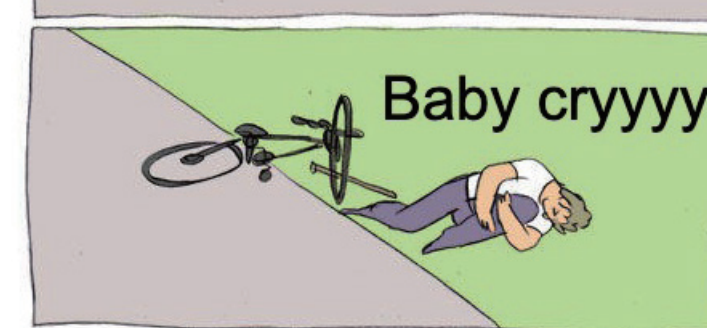

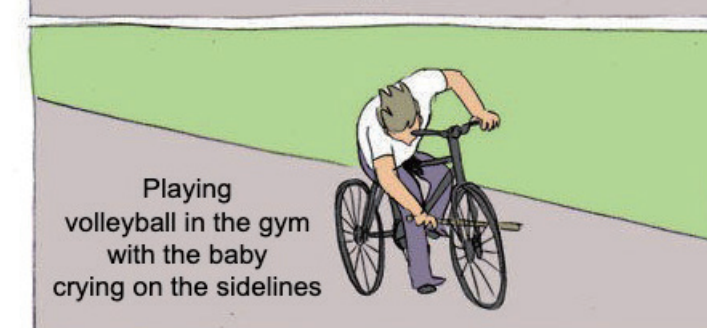

person, with Tom relating his story to someone, and incorporates flashbacks related to Tom's experiences in the present. Overall, I think it's pretty neat and also reflects how the past and present has begun to blend together in Tom's head. Moreover, it keeps you on your feet, because Tom is an unreliable narrator and all his truths seem doubtful. I also found it immensely satisfying to see his character development and how his beliefs were challenged and changed. More than that, there are these large chunks of narration where Haig reflects on the nature of time and change and life that I really enjoyed, though I do understand if that throws some readers off.

Overall, I definitely enjoyed reading *How to Stop Time*, and was left wanting to know more—about the characters, about Tom teaching history, about what Haig has to say about time and the past, and more. Sure, it's corny or melodramatic at times, but this novel is worth a read and would definitely make an excellent film based on some of its scenes. There are some more mature themes, so I would say this book would not be suitable for elementary, but overall I would recommend it to anyone interested in reading about time and living and aging. And I would definitely be giving more Matt Haig books a try.

Speeding in the MAK parking lot Today

Personality Quiz

By: Abby Janssen

1. What do you value most in a friendship?

- A. Loyalty
- B. Empathy
- C. Compassion
- D. Honesty
- E. Humor

2. Which old language do you wish you could speak?

- A. Greek
- B. French
- C. Old English
- D. Persian
- E. Latin

3. Which bright color do you like best?

- A. Yellow
- B. Red
- C. White
- D. Pink
- E. Orange

4. How would your classmates describe you?

- A. Extroverted and Funny
- B. Passionate and Empathetic
- C. Optimistic and Kind
- D. Creative and Confident
- E. Hard working and Humble

5. Which of these activities do you like doing the most?

- A. Hanging out with friends
- B. Watching youtube
- C. Playing a sport
- D. Going on an adventure somewhere
- E. Reading a book

6. How many friends do you have?

- A. So many that I can't even count them all!
- B. 3-4; it's a small group, but I'm su-

per close to all of them!

- C. 5-10; it sometimes seems like everyone wants to be friends with me!
- D. 10+; I love being around everyone, and everyone loves being around me!
- E. 1-2; my best friends are all I need!

If you got mostly C's, you're a daisy! Many people see you as a very happy and fun person! Oftentimes, you'll find yourself surrounded by a group of friends! You can always get someone to smile and laugh even when they're not feeling good!

If you got mostly D's, you're a Tulip! Wherever you go, fun follows! You're the type of person to think up the craziest but most fun ideas! People love being around you because they know that when they hang out with you, they're bound to have a good time!

If you got mostly E's, you're a lily! You're often a very quiet person at first, but once people get to know you more you can be the most fun and amazing person ever! People love spending time with you since your personality can be so fun!

If you got mostly A's, you're a sunflower! A social butterfly! People can't help but be drawn to your bright and fun personality! You love being around people, and people love being around you!

If you got mostly B's, you're a rose! A super sweet person! Although you may not be the most extroverted person in the room, you're certainly the kindest! Whenever someone needs some help, you're always one of the first to help!

Congratulations, Class of 2023! We will miss you!
